

Howler Deployment Kit (Satellite Backhaul) from Dark Wolf Ventures

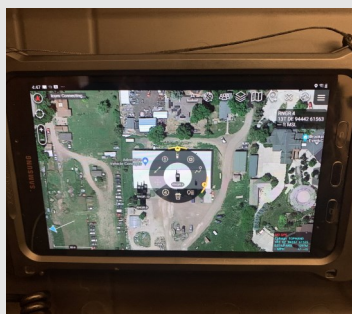

The Howler Deployment Kit (Howler-D) from Dark Wolf Ventures provides an integrated Command & Control and Satellite Backhaul solution in a rugged and highly mobile package that can be easily

deployed anywhere in the world. It seamlessly links radios around the globe and provides a common operating picture and full radio control via the ATAK application. Operating on the Iridium[®] Network, the Howler-D provides global coverage and provides significantly enhanced situational awareness.

Key Features of the Howler-D:

- Complete Command & Control capability via ATAK (or MMRIS for international customers)
- Extend the coverage and functionality of field radio solutions by providing on demand backhaul over satellite
- Provide key data such as Location, Short Messaging, and others while enabling remote status, radio control and other features
- Rugged and mobile with seamless global capability that deploys in minutes from a range of power sources
